Profile

Second-year AI Engineering student at the University of Mosul. I build AI-powered applications and backend systems, and am deepening my machine learning skills through Samsung Innovation Campus and GCI World. Seeking opportunities to learn and contribute to real-world AI and software projects.

Education

Bachelor of Science in Artificial Intelligence at University of Mosul, Mosul, Iraq — **October 2025 - Present**

- Ranked 1st in the Department of Artificial Intelligence in First Year.

Training & Programs

Samsung Innovation Campus — AI Course (SIC Levant) at Samsung — **October 2026 - Present**

10-week course: ML, deep learning, NLP & LLM fine-tuning; ends with a team AI Capstone project.

GCI World Program at Matsuo-Iwasawa Lab, University of Tokyo — **September 2026 - Present**

3-month program: data science (NumPy, Pandas & ML basics); ends with a final ML competition project.

McKinsey Forward Program at McKinsey & Company — **September 2025 - December 2025**

10-week program: problem-solving, communication, AI literacy, teamwork; earned the Forward digital badge.

Skills

Languages: Python, C++, JavaScript, SQL(PostgreSQL)

AI / ML: TensorFlow, scikit-learn, NumPy, Pandas, Matplotlib, LLM APIs (Gemini, OpenRouter)

Backend: FastAPI, REST API, Postman, SQLAlchemy, Pydantic, JWT, pytest

Frontend: React, Vite, HTML, CSS

Tools: Git & GitHub, GitHub Actions, Docker, AWS (Basics)

Projects

Napta AI - Agricultural Diagnosis - 3rd Place, University of Mosul Competition • Website

Developed a React and Vite web application integrated with Gemini and OpenRouter APIs for real-time plant disease diagnosis via image uploads, fully deployed on Netlify.

Social Media Platform — REST API Backend • Source Code

Built a FastAPI backend for a social platform (users, posts, comments, likes) with JWT authentication and authorization, PostgreSQL via SQLAlchemy with Alembic migrations, Pydantic validation, pytest tests, Docker containerization, and a GitHub Actions CI/CD pipeline that automatically tests and builds every push.

Certificates & Courses

Machine Learning Specialization from DeepLearning.AI & Stanford Online · Link — **August 2026**

Completed the 3-course program: supervised and unsupervised learning, neural networks, recommender systems, with Python labs (NumPy, scikit-learn, TensorFlow)

Python API Development from freeCodeCamp · Link — **July 2026**

19-hour course: building a production-style FastAPI backend with PostgreSQL/SQLAlchemy, JWT auth, Alembic, pytest, Docker, and GitHub Actions CI/CD. (Self-paced; no certificate issued.)

AWS AI & ML Scholarship from Amazon Web Services · Link — **June 2026**

Studied Generative AI, LLMs, and Machine Learning fundamentals, integrated with ethical frameworks for secure application with hands-on labs on AWS.

Languages

Arabic - Native • **English** - Proficient
